Review

<https://github.com/borisveytsman/acmart>
<https://zenodo.org/link>

BT and GKMT designed the study; LT, VB, and AP
conducted the experiments, BR, HC, CP and JS analyzed the
results,
JPK developed analytical predictions, all authors participated
in
writing the manuscript.

1 Problem statement

In this document we discuss how to write an ACM article.

2 Methods

This document provides LaTeX\ templates for the article. We
demonstrate different versions of ACM styles and show various
options
and commands. We add extensive documentation for these
commands and
show examples of their use.

3 Results

We hope the resulting templates and documentation will help the
readers to write submissions for ACM journals and proceedings.

4 Significance

This document is important for anybody wanting to comply with
the
requirements of ACM publishing.
